

## Customizable, Comprehensive Breast Imaging Solutions

As the largest private practice in the country, we offer access to radiologists with extensive training and experience in a full suite of breast imaging services.

### Full suite of services

Many hospitals and clinics—especially rural facilities—can't staff specialty radiologists for every possible need.

### High-quality interpretations

With vRad radiologists, you can be assured that they are experienced and passionate about breast imaging. Our 99.8 percent accuracy rate for final interpretations is unmatched in the industry.

### Cost-effective

Don't let questions about volumes or fixed costs stop you from meeting the needs of your patients. Unlike the long-term investment required to add dedicated radiologists to your staff, we're here to grow with you and provide the services and expertise you need, as you need it.

### Flexibility

The vRad breast imaging team is available to help meet overflow needs and free your existing team to review other studies or attend to mammograms, sonograms and interventional procedures. Our radiologists' wide range of expertise can also enhance your level of care by filling any of your staff's specialty gaps—including breast MRIs.

### Communication

Recognizing the importance of personal communication, vRad radiologists are available to the referring physician to discuss the report. Should the physician request the vRad radiologists to meet one-on-one with the patient, we can do that too. Our radiologists are a resource for not only the facility and physicians but to the patient as well.

What are you waiting for? With vRad breast imaging services, we can customize a service to meet your specific needs. Contact vRad today at 800.681.8616 to solve your breast imaging interpretation needs.

### vRad's breast imaging suite of services
